

Are other design variations being considered?

In addition to the Basic and Modified Connectivity Options for the Partial Cover Lowered Alternative, other design variations to these options are being considered but have not been fully evaluated and remain unresolved issues. As part of the public outreach process CDOT and FHWA will continue to seek feedback from the community, stakeholders, and public agencies on these options and variations. These variations apply only to the Partial Cover Lowered Alternative, and there are no variations being considered for any of the other alternatives at this time.

The variations under consideration are:

- Access to I-70 at Vasquez Boulevard/Steele Street and Colorado Boulevard
- Highway cover
- Frontage roads
- North/South connectivity

These variations were developed to respond to community concerns and to balance community, business, and transportation needs.
